

Are you EV Ready?

In an ever changing automotive industry where more and more Electric Vehicles are being sold it is important that we are ready to deal with the roll-out, maintenance and safety of BEV's.

To help with this we're pleased to introduce our new Electric Vehicle Consumables range. This booklet contains a brief guide to electrical operations on EV's in various scenarios with tables to advise on product needed during this work. Electric vehicles carry extra risks and safety is the most important thing while working on any vehicle, with this in mind our range of EV consumables put the safety of you and your colleagues first.

Check out the booklet to find out more on EV PPE, safety products, signage, lock-out, tag-out, testing and more!

What's Inside?

Electrical Operations

A brief guide to working on electric vehicles in various scenarios with a handy system to advise on products needed during work.

EV PPE

With EVs carrying more risk, personal safety should be at the forefront of all work carried out on vehicles - check out our EV PPE range.

EV Safety

Safety around the workshop and EV is imperative. Keep vehicle technicians safe with safety chains, rescue poles, insulating mats, fire blankets and more.

EV Signage

Making sure the working area is properly cordoned off and signed is vital. In our range are signs for EV safety, high voltage, chains and even shock and CPR advice.

Lock-Out & Tag-Out

Lock-Out and Tag-Out ensures no-one touches or tries to move the vehicle while it's being worked on.

Testing & Measuring

With a voltage detector and multimeter you can make sure that there are no currents running through the vehicle before work commences.
